# High throughput validation for 400G/800G optical transceivers

Dr. Ali EMSIA  
Tektronix GmbH, Germany

---

virtual conference session:  
**Data Center Interconnects – Towards Mass Manufacturing**  
online / October 6th 2020 / 4 – 7pm

---

# High throughput validation for 400G/800G optical transceivers

Presenter: Dr. Emsia

# Tektronix High-End Solutions Overview

- Tektronix is a leading T&M company serving engineering and technical professionals
- Founded in 1946, acquired by Danaher in 2007, 2016 a Fortive company
- Headquartered in Beaverton, Oregon
- Leadership positions in key products and markets
- Highly-respected brand based on high quality innovative products, engineering excellence and global service and support
- Award winning:
  - Oscilloscopes
  - Signal Sources
  - Spectrum Analyzers
  - Video Test

A Tektronix Company

- Keithley is a leader in precision electrical test
- Founded in 1946, acquired by Tektronix in 2010
- Headquartered in Solon, OH
- Offering instruments and systems to meet any measurement requirement from nanovolts to gigahertz
- 21 R&D 100 awards as well as honors from Semiconductor International, Solid State Technology, Electronic Products, Test & Measurement World magazines

# Tektronix High-End Solutions Overview

TEKTRONIX SIMPLIFIES SERIAL STANDARDS TESTING COMPLEXITY WITH MEASUREMENT EXPERTISE AND TOOLS THAT PROVIDE ACCURATE TEST RESULTS FOR HIGH-SPEED COMPUTER AND COMMUNICATIONS SYSTEM DESIGNS

**DSA8300 Series Oscilloscopes**

Characterizes the electrical and optical signal performance of components, boards & systems.

**DPO70000SX ATI Performance Oscilloscopes**

Performs pass/fail compliance test and debugging of high speed electrical components, boards & systems.

**OM4000 Lightwave Signal Analyzers**

Analyzes optical modulation formats used in next generation long-haul networks.

**RF Recorder & Playback /Signal Analyzers**

Analyzes RF up to 26.5GHz at Real Time with 800MHz acquisition bandwidth

**BERTScope Bit Error Rate Testers**

Stress tests communication system receivers to ensure error-free operation in real-world environments.

**Keithley Waver-Testing**

Characterization of semiconductor at device, wafer or cassette level. Configurable at customer needs.

**AWG Arbitrary Waveform Generators**

Aids research efforts by generating complex signal patterns that help evaluate communications system designs.

**Parameter Analyzer / Curve Tracer**

Synchronized I-V and C-V characteristic

# Why does the Industry need PAM-4?

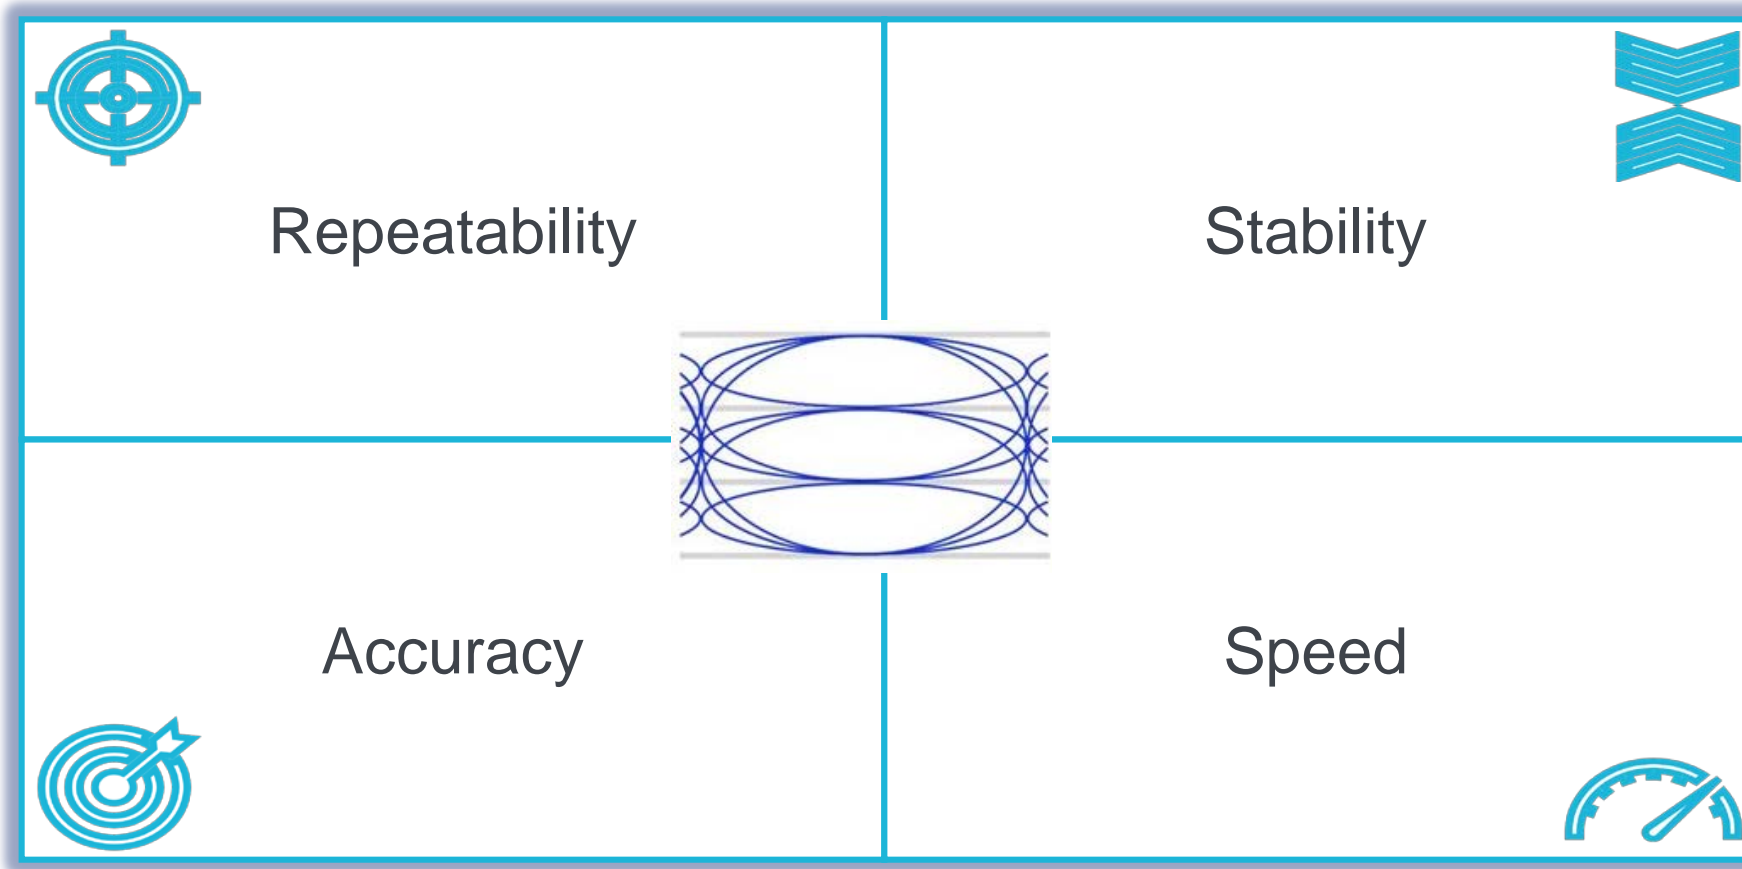

## PAM-4 SIGNALING ENABLES HIGHER DATA THROUGHPUT

- NRZ > 28 Gb/s limits trace length or increases cost
- ✓ PAM-4 offers 2 times the throughput at the same Baud rate
  - at 28 GBaud PAM-4 = 56 Gb/s
  - PAM-4 packs 2 bits / symbol -> needs half the channel BW
  - Allows designers to develop products to fit cost structure of available channel technologies.

# Measurement Challenges

## MAJOR INDUSTRY CHALLENGES WITH PAM-4 SIGNALS

# Contrast Between PAM-4 and NRZ

## COMPARISON OF PAM-4 VERSUS NRZ OPTICAL MEASUREMENTS

- PAM4 Measurements

- Transmitter and dispersion eye closure quaternary (**TDECQ**)
- Outer Optical Modulation Amplitude ( $\text{OMA}_{\text{outer}}$ )
- Outer Extinction Ratio (OER)
- Level separation mismatch ratio ( $R_{\text{LM}}$ )

- NRZ Measurements

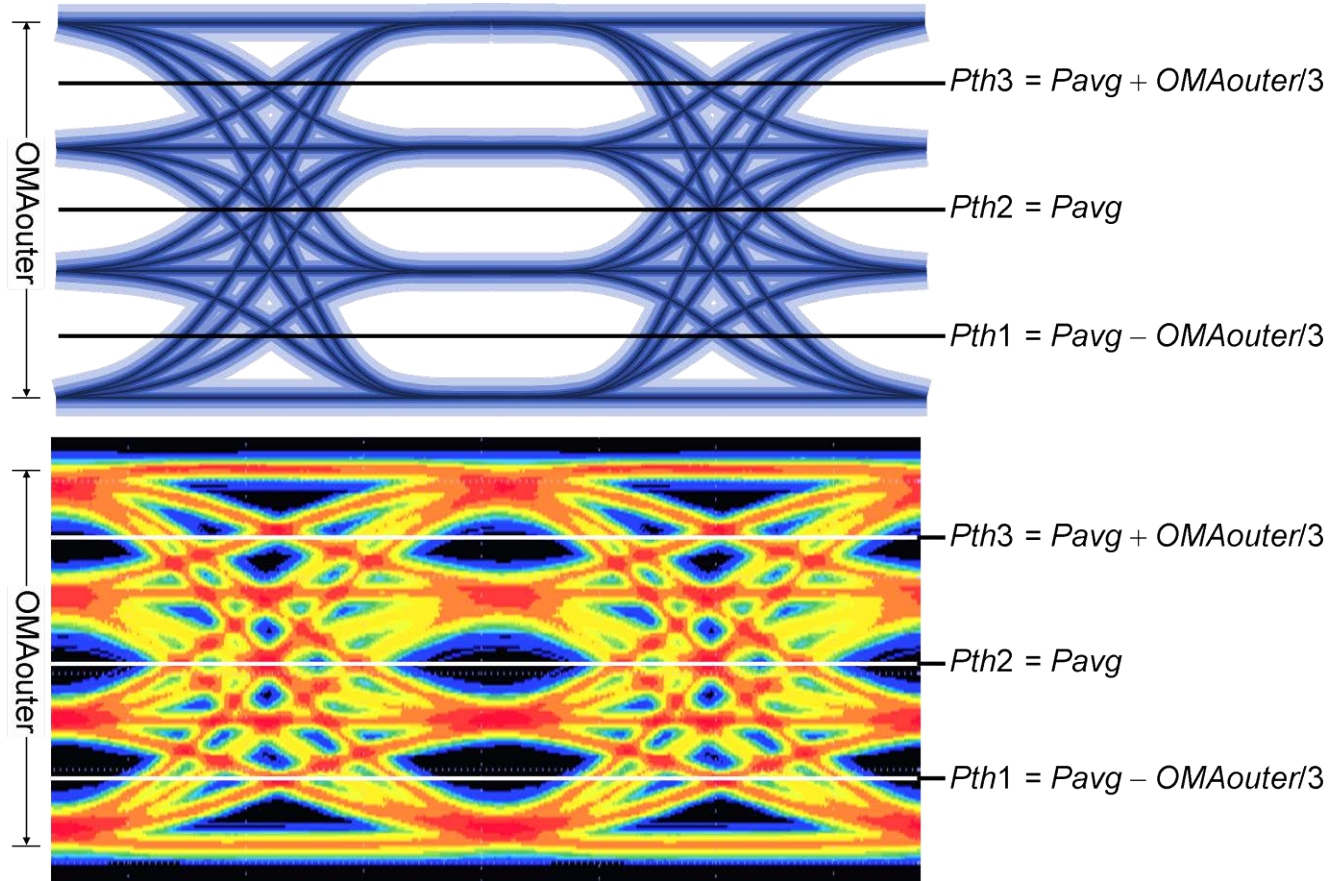

- Tx Eye Mask
- Optical Modulation Amplitude (OMA)
- Extinction ratio (ER)

## Transmitter and Dispersion Eye Closure Quaternary (TDECQ)

- Compare the real signal to a **simulated ideal signal**
  - Test and ideal signals have the same OMA<sub>outer</sub>

# Measurement Differences

## PAM4 TDECQ

- Measures each of the optical transmitter's vertical eye closure as measured through and optical to electrical converter.

$$TDECQ = 10\log_{10}\left(\frac{OMA_{outer}}{6} \times \frac{1}{Q_t R}\right)$$

## NRZ Eye Mask

- Measures the number of hits on a mask to characterize the BER of a transmitter.

# OMA<sub>outer</sub>

## PAM4

- **From 121.8.4 Outer Optical Modulation Amplitude (OMA<sub>outer</sub>)**
  - ... the difference between the average optical launch power level  $P_3$ , measured over the central 2 UI of a run of 7 threes, and the average optical launch power level  $P_0$ , measured over the central 2 UI of a run of 6 zeros...

## NRZ

# Extinction Ratio

## PAM4

- $ER = 10\text{Log}(P_3 / P_0)$
- Sensitive to proper dark-level calibration and DSP

## NRZ

$$ER = 10\text{Log}(E_1 / E_0)$$

# RLM

**Level Separation Mismatch Ratio:** Defined as a function of the mean signal level transmitted for each PAM4 signal.

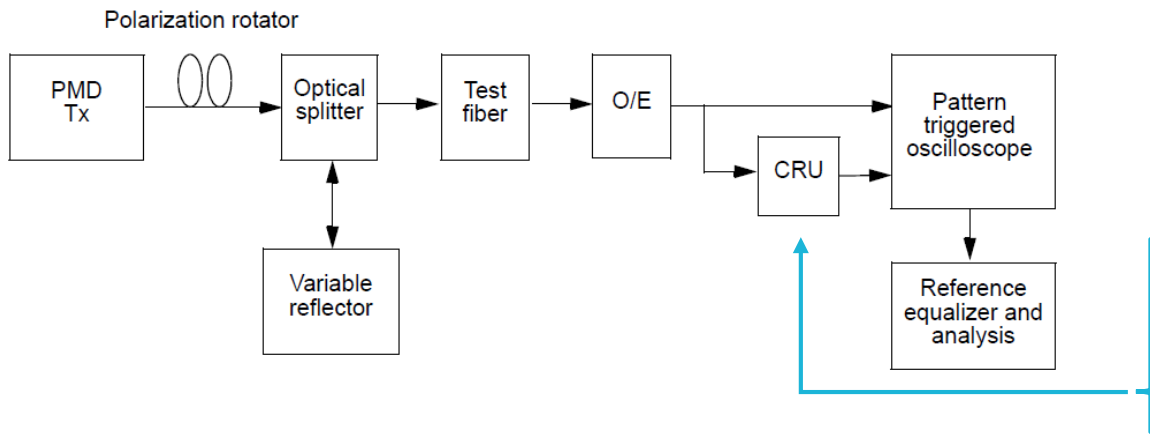

# Market update

## WHAT CHANGED ON THE TRANSCEIVER MARKET?

- Technical Challenges:
  - IEEE 802.3bs/cd **mandates** to use an optical clock recovery in order to guarantee accurate results unless you prove alternate solution with same results.

e.g. 400GBASE-DR4: The clock recovery unit (CRU) has a corner frequency of 4 MHz and a slope of 20 dB/decade. The CRU can be implemented in hardware or software depending on oscilloscope technology.

TCR801

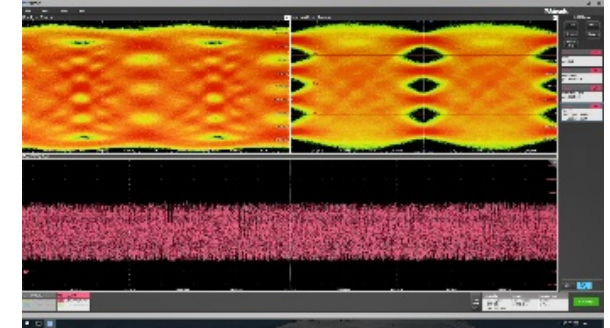

Optical clock recovery will guarantee no field failures!  
Optical clock recovery will guarantee highest yield.

# Industry Challenges

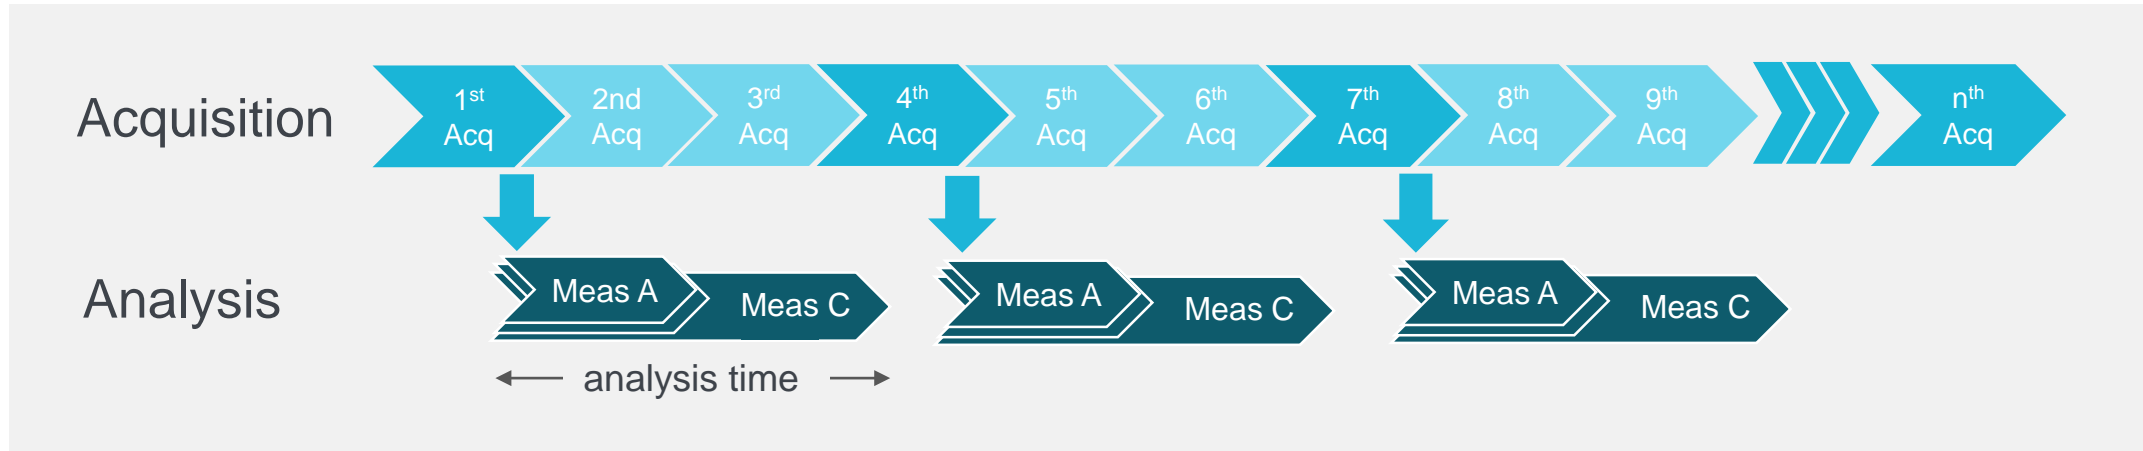

## AND HOW TO OVERCOME THEM

- Able to adapt to market changes or ramps (Covid-19)
- Instrument remote access
- Test accuracy (false passes or repeatability issues)
- Cost of test
- Multi-channel testing

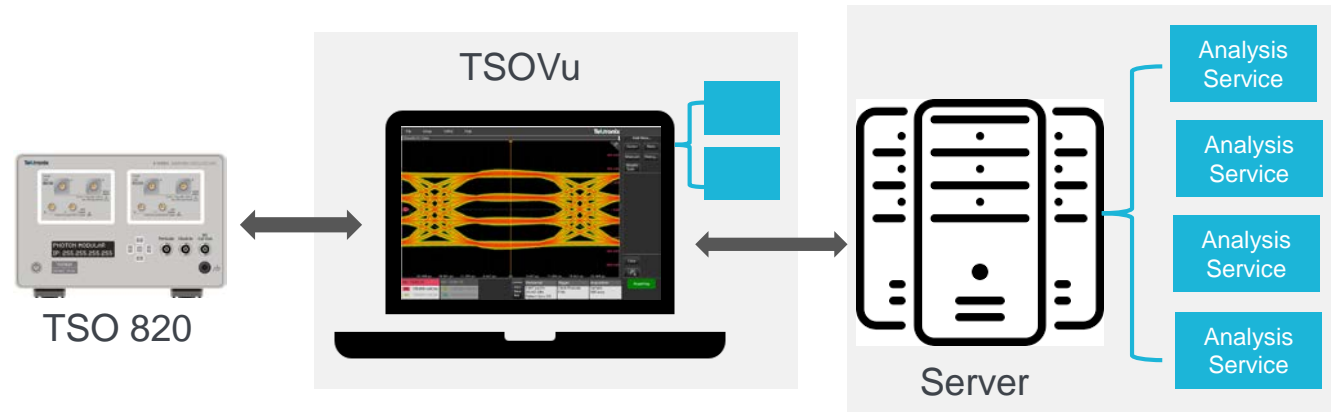

# New Work Flow with Edge Computing

## IMPROVE ANALYSIS TIME

Improve analysis time by:

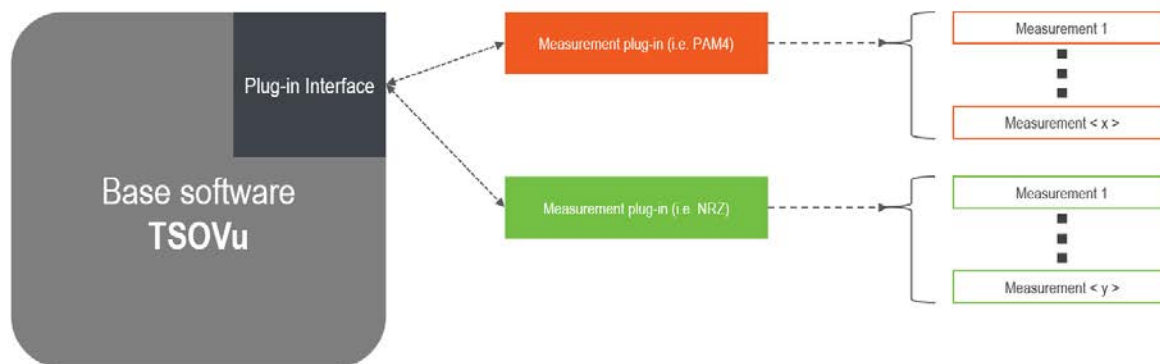

- Acquisition and measurements run in parallel
- Measurements across multiple channels run in parallel

# Product Overview: TSOVu

## NEW OPTICAL TRANSCEIVER TEST PLATFORM – SOFTWARE

- New measurement plug-in interface with dynamic UI
  - Enables expansion of the measurement library for supporting new standards, emerging and final, as well as custom developed measurements
- Flat, intuitive, and modular user interface with multiple display modes
- Offline and Remote modes of operation
  - Extend analysis and visualization capability beyond the base oscilloscope features
- Fast acquisition and analysis of NRZ / PAM4 signals on multiple inputs
  - Simultaneously measurement for increased throughput
- Comprehensive SCPI based Programmatic Interface
  - Synchronous PI: automation without sleep/wait statements
- Support for multiple file formats enables exporting / importing data for analysis

# TSOVu Measurements

- PAM4 Measurements
  - RLM
  - Level
  - Level Deviation
  - Level Thickness
  - OMAouter
  - Extinction Ratio
  - Effective Symbol Levels
  - Eye Width
  - Eye Height
  - Transition Time
  - Overshoot
  - Undershoot
  - TDECQ
- Pulse measurements (Timing)
  - Period
  - Frequency
  - Rise
  - Fall
  - Positive Cross
  - Negative Cross
  - Positive Width
  - Negative Width
  - RMS Jitter
  - Pk-Pk Jitter
  - Delay
- Pulse measurements (Amplitude)
  - High
  - Low
  - Amplitude
  - Max
  - Min
  - Mid
  - Mean
  - Pk-Pk
  - AC RMS

**Note:** Pulse measurements do not require a license to operate

# Flexible scaling. Standard.

ADD, RECONFIGURE, AND SCALE TO MATCH EVERYDAY NEEDS

**TSO8C17:** Single channel optical module

**TSO8C18:** Dual channel optical module

- A single module to provide 1 or 2 channel testing

# Flexible scaling. Standard.

ADD, RECONFIGURE, AND SCALE TO MATCH EVERYDAY NEEDS

- Add a second module to the system to increase channel capacity and measurement throughput

# Flexible scaling. Standard.

ADD, RECONFIGURE, AND SCALE TO MATCH EVERYDAY NEEDS

- Need a secondary tester?
- Transfer an optical module to another mainframe to cover other test needs

# Flexible scaling. Standard. , 800G

ADD, RECONFIGURE, AND SCALE TO MATCH EVERYDAY NEEDS

- Add a TCR801 Optical Clock Recovery when a clock signal is needed for compliance testing or cannot be provided by DUT/PPG

# Quadrants of success

## BUSINESS CHALLENGES

### Cost of test

- ✓ Lowest cost modular solution
- ✓ Multi-channel testing
- ✓ Highest throughput

### Ramp / Scale

- ✓ User upgradable
- ✓ Rack ready, drop-in solution

### Lead time

- ✓ Tektronix agile manufacturing can react to changes in demand

### WW support

- ✓ Gold-care package
- ✓ World-wide on-site support teams of AEs

3U high

1U high

## TECHNICAL CHALLENGES

### Repeatability

- ✓ We design and manufacture for repeatability

### Stability

- ✓ Self-compensation

### Accuracy

- ✓ NIST-traceable processes

### Speed

- ✓ Fully synchronous PI
- ✓ Parallel acquisition

# Tektronix 8 Series

## SYSTEM MEASUREMENT INTEGRITY

- ✓ New platform confidence that measurements are correct, repeatable, and correlate

TDECQ  
TDECQ (Transmitter and Dispersion Eye Closure Quaternary) is a measure of each optical transmitter's vertical eye closure when transmitted through a worst case optical channel, and equalized with the reference equalizer. This measurement is defined in IEEE Ethernet (802.3) specifications.

## CORE FLEXIBILITY

- ✓ Enables users to adjust to changes in the workflow without sending hardware back to the factory
- ✓ Proactively adapt capital investments to industry changes

## REFINED USER EXPERIENCE

- ✓ Networked instrument for all workflows, even "work from home"
- ✓ Streamlined user interface to make complex tasks simple
- ✓ Optimize instrument uptime in automation environments using Synchronous PI

## SIMPLIFIED SINGLE PLATFORM

- ✓ The most compact modular sampling oscilloscope to cover all modes of test
- ✓ Modern software architecture with a single code base
- ✓ No more complex optioning schemes as a prerequisite to test
